Lab Work -02

Preparing Dynamic Portfolio

1. You will develop a page where people can generate their own portfolio.
2. You will ask the user to log in with email and password if they want to access the feature
3. The user will enter the value that they include in their portfolio. There will be different sections-
    a. One section will contain- full name, contact information, one .jpg/.png photo, and short bio.
    b. In another section, there will be soft skills and technical skills.
    c. Include Academic background (institute, degree, year and grade) with is necessary but it's not a compulsory section.
    d. Another segment should contain one's work experience (Company name, job duration, job responsibilities)
    e. The last section can be optional containing his previous project or publications.
4. Once the user confirms the entry of the data, you will generate a pdf and also store the information in a database.
5. You can develop this project in any language. Save this project in Git repository.
